

Monthly Inflation: “Remain Under Control”

Author: Juniman – Chief Economist

CPI Review

Consumer Price Index (CPI) in February 2018 increased due to the rising prices of foodstuffs, cigarette, gasoline, and gold jewelry. Monthly inflation in February reached 0.17% m-o-m, lower from 0.62% m-o-m in the preceding month. Based component, the inflation was posted by the foodstuffs component increased by 0.13 m-o-m, the prepared food component rose by 0.043% m-o-m, and the clothing component rose by 0.35% m-o-m. Furthermore, the housing component experienced rose by 0.22% compared to preceding month, the medical care component increased by 0.26% m-o-m, and the education component increased by 0.07% m-o-m. Furthermore, the inflation was also posted by the transportation, communication, and financial services component experienced slightly rose by 0.02% m-o-m.

Inflation in the foodstuffs component in February 2018 mainly stemmed from higher prices of rice, garlic, fish, onion, instant noodles, grapes, papaya, water melon, and chili. We believe the price increase in these products were mainly due to

- a. Lower domestic supply
- b. Higher domestic demand

Furthermore, inflation in the prepared foods component in February 2018 mainly stemmed from higher prices of fried chicken, "soto", cigarette, white cigarette, and filter cigarette. Inflation in the clothing component in February 2018 still came primarily from higher prices of gold and jewelry. Inflation in the education, recreation and sports component in February 2018 mainly stemmed from higher prices of sports sub-sector.

Meantime, inflation in the housing component in February 2018 came primarily from higher prices of wage of workers not foreman, servant wages, electricity tariff, housing rents, and housing contracts.

Meanwhile, inflation in the medical care component in February 2018 still came primarily from higher price of body care services sub-sector. Inflation in the transportation, communication, and financial services component in February 2018 came primarily from higher prices of gasoline and car.

On a yearly basis, inflation remains in check with the downward trend still intact, as the inflation slightly decreased to 3.18% y-o-y in February 2018 compare 3.25% y-o-y in the previous month. Furthermore, year to date inflation in January-February 2018 reached 0.79% lower than 1.21% for the same time frame in 2017.

CPI Outlook

We expect inflationary pressures to remain under control in March 2018. Some food prices have increased such as cooking oil, chicken meat, eggs, wheat, milk, red pepper, chili, onion, and garlic. However, the impact of the harvest season caused the prices of some foodstuffs to decline as rice, soy bean, and vegetable. Meanwhile, the increase in non-subsidized fuel prices adds to inflationary pressure this month. Furthermore, the price of gold jewelry has increased this month in line with rising world gold prices. Moreover, the impact of the weakening of Rupiah also raised imported inflation. Based on these factors, we expect the consumer price index in March 2018 will reach 0.13% m-o-m, lower than 0.17% m-o-m in February 2018. Nevertheless, we expect the yearly inflation rate in March 2018 will increase to 3.34% y-o-y from 3.18% y-o-y in February 2018. Looking ahead, we also expect inflation may reach 3.50% y-o-y by the end of 2018.

Meanwhile, we also expect core inflationary pressures also remain under control in March 2018. The pressure comes from the increase in price of gold jewelry, cigarette, car prices, housing rent, housing contract, and servant wages. We expect core inflation in March 2018 may reach 0.19% m-o-m lower than 0.26% m-o-m in February 2018. However, we expect the yearly core inflation in March 2018 may increase to 2.68% y-o-y from 2.58% y-o-y in the previous month. Forward looking, we also expect core inflation may reach 3.00% by the end of 2018.
